QUIK-REVIEW

PLATFORM VS. STATION CONNECTIONS

CONNECTION	VIA	DEFAULT PORT	DESCRIPTION	PROTOCOL REQUIRED	SERVICE/ PROCESS
PLATFORM CONNECTION	Workbench	3011	When connected to a Niagara platform, the Workbench communicates (as a client) to that host's platform via the platform daemon (or niagarad), a server process.	niagarad and HTTP	Platform daemon (niagarad.exe)
	Web browser	N/A	A platform connection is not available using a standard web browser.	N/A	N/A
STATION CONNECTION	Workbench	1911	A Workbench connection to a station uses the Fox protocol with authentication based on a User Service configured for the station.	Fox	Fox Service
	Web browser	80	A web browser connection to a station uses an HTTP authentication mechanism to validate users based on the station User Service.	HTTP	Web Service (station)
	Web browser (secure) SSL	443	A web browser connection to a station uses an HTTPS authentication mechanism to validate users based on the same station User Service.	HTTPS	Web Service (station) and Crypto Service
	Station-to-station	1911	Pre-configured user name & password must correspond to an existing user based on the station User Service.	Fox	Fox Service
