QUIK-REVIEW

PLATFORM SERVICES VIEWS

There are 7 views that may be available for either QNX- or Windows-based platforms:

View (Service)	QNX-based JACE	Windows-based JACE	Description
TCPIP Service	x	x	Provides access to the same configuration using the platform's TCP/IP Configuration view.
License Service	x	x	Provides access to the same configuration using the platform's License Manager view.
Serial Port Service	x	x	Allows review of available serial ports on the host platform. For QNX-based JACEs with configurable serial ports (e.g. JACE-403), this is where you configure RS232 and RS485 port usage.
Power Monitor Service	x		Currently applies to QNX-based JACEs, providing configuration and status of the JACE's battery monitoring and AC power-fail shutdown routines.
Dialup Service		x	Provides status of the platform's dialup daemon and allows "blockout" of dialup functions from station logic, if desired.
Hardware Monitor Service		x	Applies to JACE-NXS station only. Provides status of several internal environmental variables, including alarm limit configuration.
NTP Service	x	x	Provides access to NTP (Network Time Protocol) Service configuration for time synchronization functions. *(In version 3.4 and later, this service is an option to the older Time Synch Service.)*
